Summary

I moved to Front-end development from another professional field (Architecture and Construction engineer, management), so I got all my knowledge to start from scratch independently. I got my basic knowledge of HTML/CSS at the HTML Academy. Continuing to work on the main specialty, I was doing small orders as a freelancer.

A year later, I found out about the RS-School and passed a full course (advanced JS, advanced React). After that, I continued to self-study and fulfill orders for freelancing. I am constantly looking for new knowledge, strive for development and get great pleasure from it.

Right now I plan to start working full time on the frontend only. A total reboot of career and life, something like that. I like to do what benefits people, what makes them better or just have fun. I think this is the main thing in my work.

Skills

Hard skills:

- + HTML5/CSS3
- + JavaScript
- + jQuery (basic)
- + Responsive design/mobile first
- + BEM
